

Nature's Services - what invertebrates do to help

Invertebrates can help by being: pollinators (so we get seeds and fruits), biocontrol agents (controlling pests), food for birds, food for lizards and many other things. Choose from this list, the correct job for each invertebrate

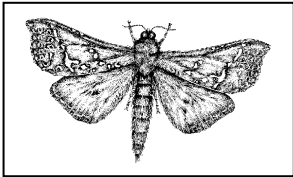

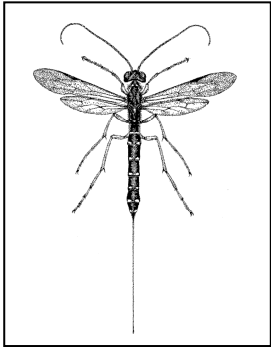

A Bee is a _____

A Beetle can be _____

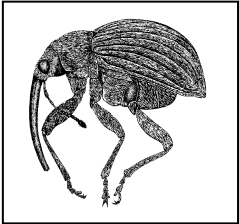

A small native parasitoid wasp is a _____

A moth can be _____

A gorse weevil can be a _____

Can you think of some other examples of invertebrates (animals without back bones)?
Write them down here (or draw a picture of them)

Can you think of some other services that invertebrates do for humans and the environment?
